

# M.N. NAFEEL

**Bachelor (Honors) in Mechanical Engineering Technology**  
**IMechE(Affiliate Student), IAENG**

Address: Kandy, Sri Lanka.

Phone: +94 779 422 553

Email: [Nafeel550@gmail.com](mailto:Nafeel550@gmail.com)

LinkedIn: [linkedin.com/in/mnnafeel](https://www.linkedin.com/in/mnnafeel)

## SUMMARY

Mechanical Engineering Technology graduate with a strong foundation in engineering principles, mechanical systems, manufacturing processes, workshop practices, and product design and development. Strong analytical and problem-solving skills with a commitment to innovation, continuous improvement, and professional growth. Eager to apply engineering knowledge and contribute effectively to multidisciplinary teams in achieving organizational goals and engineering excellence.

## EDUCATION

- Bachelors (honors) in Mechanical Engineering Technology

**Lincoln University College**

Second Class Upper Division

Oct 2024 - Apr 2026

- Advanced Diploma in Mechanical Engineering

**City & Guilds London Institute**

Jun 2023 – Dec 2025

- Diploma in Production Technology

**Srilanka German Training Institute**

Class – Merit Pass

Feb 2020 – Mar 2023

## WORK EXPERIENCE

### Industrial Trainee – Mechanical and Electrical Engineering

Sri Lanka Ports Authority, Colombo

September 2022 – March 2023 (06 Months)

- Supported preventive and corrective maintenance activities for mechanical and electrical equipment to improve operational reliability.
- Performed workshop operations including turning, milling, drilling, fitting, and basic machining processes.
- Assisted welding and metal fabrication activities using metal arc welding techniques.
- Participated in troubleshooting and servicing of electrical and electromechanical systems.
- Supported maintenance and rewinding of single-phase and three-phase electric motors.
- Collaborated with multidisciplinary teams to ensure equipment availability and minimize downtime.
- Applied workplace safety procedures and standard maintenance practices in industrial environments.

### Intern-Manufacturing

Hemas Consumer Brands, Dankotuwa

November 2025 – April 2026 (05 Months)

- Supported daily manufacturing operations and production activities within an FMCG environment.
- Monitored production KPIs and assisted in improving operational efficiency and productivity.
- Participated in Lean Manufacturing, TPM, and Kaizen initiatives to reduce process losses.
- Assisted maintenance coordination and utility management to support uninterrupted production.
- Contributed to process optimization activities across third-party manufacturing facilities.
- Worked with production, quality, and engineering teams to achieve safety, quality, and productivity targets.
- Supported continuous improvement initiatives aimed at reducing downtime and improving manufacturing performance.

# SKILLS / KNOWLEDGE

**Technical:**

- **CAD Design:** SolidWorks, AutoCAD, Autodesk Inventor, Fusion 360
- **Engineering Analysis:** ANSYS, MATLAB
- **Programming:** Python, C++
- **Manufacturing & Maintenance:** Lean Manufacturing, Six Sigma TPM, Kaizen, Process Improvement, Root Cause Analysis, Preventive maintenance, Workshop practices, Welding & Fabrication, Machining Operation
- **Mechanical Engineering:** Fluid Mechanics, Material science, Thermodynamics, Mechanics of machines, Engineering graphics, Machine Design

**Soft Skills:**

- Problem Solving
- Team Collaboration
- Communication Skills
- Adaptability
- Technical Learning
- Time Management
- Work Ethics
- Analytical Thinking

# CAREER OBJECTIVE

To secure a challenging engineering position in manufacturing, production, maintenance, automation, or mechanical design where I can apply my technical knowledge, industrial training, and problem-solving skills to improve operational efficiency, support continuous improvement initiatives, and contribute to organizational growth while advancing professionally.

# CERTIFICATION

- OSH (E-certificate)
- Chemical Handling Health & Safety
- Fire Fighting Rescue Training
- Machine Learning (E-certificate)

# ACADEMIC PROJECT

**Feasibility Study on Small-Scale Plastic Pyrolysis System in Sri Lanka**

- Conducted a research-based feasibility study on converting plastic waste into usable fuel through pyrolysis technology.
- Evaluated the potential of pyrolysis as a sustainable waste management and energy recovery solution for Sri Lanka.
- Proposed a conceptual small-scale system design considering environmental and operational factors.

**Green Maintenance Practices in Automotive Workshops**

- Proposed environmentally sustainable maintenance strategies to improve workshop efficiency and reduce environmental impact.
- Analyzed green maintenance techniques applicable to automotive workshop operations and industrial service environments.
